

REMARKS

The application has been amended to overcome the examiner's objections and rejections.

Claims 1-9 were rejected under 35 U.S.C. 103(a) as being unpatentable over Feinbloom (US 4182552 in view of Bowerman (US 3841769).

Claim 1 was amended to claim: "A narrow viewing field attachable mirror assembly attachable to a side rear view mirror of a vehicle for pinpointing a precise viewing location such as a blind spot behind a vehicle, the assembly comprising:

a narrow viewing field mirror assembly comprising a base comprising a flat exterior attaching surface covered with an adhesive layer for attaching to a mirror surface of a side rear view mirror of a vehicle, an interior mirror mounting surface spaced apart from the attaching surface and structured at an angle to the attaching surface to position a mirror mounted thereon at a different angle from the side rear view mirror of the vehicle, a post and ball and socket connection extending orthogonally from the interior mirror mounting surface, a narrow viewing field mirror having a flat reflective mirrored surface and having a narrow dimension wherein the flat reflective mirrored surface is not greater than two inches in width enabling the reflective viewing of a specific location viewed at a different angle from the vehicle rear view mirror to which it is attached, the narrow viewing field mirror pivotally attached to the post and ball and socket connection so that the normal perpendicular orientation of the narrow viewing field mirror to the post is at an angle to the exterior attaching surface, the ball and socket connection having a means for locking the narrow viewing field mirror in a specific orientation, the assembly adapted to allow for a full circular range of motion to be adjustable at any desired angle

to focus on any desired precise viewing location including a blind spot not visible in the side rear view mirror of the vehicle."

None of the prior art taken singly or together provide a narrow view mirror assembly having a flat reflective mirrored surface and having a narrow dimension wherein the flat reflective mirrored surface is not greater than two inches in width enabling the reflective viewing of a specific location viewed at a different angle from the vehicle rear view mirror to which it is attached with full pivot ability attached to side rear view mirror of a vehicle to focus on any desired precise viewing location including a blind spot not visible in the side rear view mirror of the vehicle.

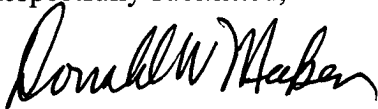

Claims 2-6 depend upon and further limit claim 1 now seen allowable, therefore claims 2-6 are seen to be allowable.

Claims 7-9 were canceled.

In view of the above amendments and remarks, claims 1-6 are seen to be allowable. Reconsideration and allowance of claims 1-6 is respectfully requested.

A Petition to Revive an Abandoned Application Fee of \$750 and the Petition to Revive are attached. No additional fee is seen to be due.

Respectfully submitted,
